

NEVER-RUST PERIMETER WARNING LINE SYSTEM

Our Never-Rust Perimeter Warning Line System answers the most fundamental question in guarding hazardous areas – how can you set up a quick visual warning line system that is both OSHA compliant and economical to install? Our Never-Rust Perimeter Warning Line System answers both questions but with multiple options that will make this an indispensable solution in your guarding arsenal. First the name. The Never-Rust Perimeter Warning Line System is a completely non-metal warning line solution. Painted metal systems all rust eventually which can stain the rooftop. With the Never-Rust Perimeter Warning Line System, the weighted base is made from 100% recycled rubber materials. This eco-friendly product weighs 30 lbs. and can be left outside indefinitely without damage to roof membranes.

The most economical choice is the **Never-Rust Temporary Warning Line System**. Lightweight and quick deployment makes this a great choice for setting up a visual warning around a known hazard. Simply set the high-impact polyethylene stanchion in place, drop the weighted rubber base over the top and string the warning flags. Quick setup and easy removal are benefits you will appreciate every time you use them. Stanchions and bases can be stacked and stored compactly away for the next use.

USES:

- Roof Tops
- Crowd Control
- Construction Sites
- Parking Lots
- Manufacturing Facilities
- Office Buildings

FEATURES:

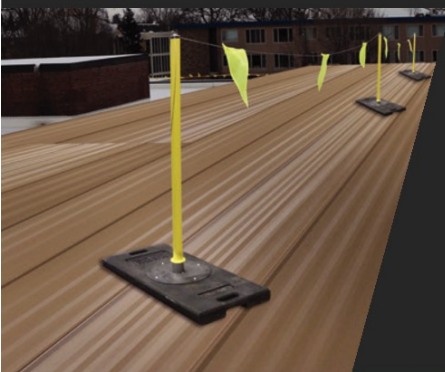

- Non-skid Design
- Up to 25' Stanchion Spacing
- 30" x 14" Base Dimension
- Easy-grip Handles on Base
- Safety Orange Stanchions
- 39" Flag Height per OSHA
- Vinyl Flags Rated for OSHA available in 100' increments

NEVER-RUST PERMANENT WARNING LINE SYSTEM

For longer more permanent guarding needs consider the **Never-Rust Permanent Warning Line System**. The permanent system is designed for guarding applications like roof perimeters, construction sites, parking garages or any area that needs a permanent yet portable solution.

The Never-Rust Permanent Warning Line System eliminates the orange stanchion and replaces it with an aluminum stanchion that is capable of supporting a variety of flagged line. Heavier flagged lines may require closer stanchion spacing to maintain prescribed OSHA line height. This durable system will stand up to the harshest elements for many years while maintaining it's Never-Rust reputation.

FEATURES:

- Non-skid Design
- Up to 20' Stanchion Spacing
- 30" x 14" Base Dimension
- Easy-grip Handles on Base
- Aluminum Stanchions
- 39" Flag Height per OSHA
